ABOUT ME

I'm a recent Computer Science graduate with a strong passion for software development, particularly in building enterprise-level applications for mobile and web platforms. I gained hands-on experience as a Software Engineer intern, contributing to high-impact projects such as financial services apps, auto financing platforms, AI-powered customer service systems, and OMS/WMS. My tech stack includes React Native, Flutter, Next.js, Kotlin, and database management. These experiences have strengthened my engineering skills and deepened my understanding of building scalable, user-focused solutions. I'm eager to continue growing as a developer and contribute to impactful projects that drive innovation and deliver real value to users.

SKILL

Programming Language : C#, Python, Java, JavaScript, TypeScript, MATLAB, Dart

Frontend : React.js, React Native, Next.js, Flutter

Backend : Django, Node.js, Express.js, Kotlin, ASP.NET

CSS Frameworks & Preprocessors : HTML, CSS, Material UI

Database : MySQL, PostgreSQL, MSSQL

Version Control & Collaboration : GitHub, GitLab

Tools : Visual Studio Code, Figma, IntelliJ, Swagger, Postman

EXPERIENCE

Software Engineer Internship at JIBSOFT Co., Ltd.

2024 - 2025

Auto Financing Application (React Native)

(An Android application developed for bank customers using auto finance services)

- Contributed to the development of a Mobile application for Marketing (MAM application) in both frontend and backend, collaborating with the team under sprint-based workflows to deliver core product features.

KYC Application (Flutter)

(An Android application for customer NCB history verification)

- Developed and implemented a motorcycle hire-purchase loan product feature in a financial application serving over 100 users.

Bot Web Application (Kotlin/Next.js)

(A web application that helps answer customer questions like an admin and manages the bot's system)

- Fixed and enhanced the bot's system by adding departments and roles to manage organized permissions effectively.
- Created a page for configuring the AI model, and a bot configuration page to define the personality traits you want the bot to have and how you want it to respond

Discord bot and website platform to manage personal learning [\[LINK\]](#)

2024

(Duo Project in Computer Science Project Course)

- We designed and developed a Discord bot and web platform for personalized learning management by pulling the unofficial MyKU API wrapper using PyMyKU.
- Use Python, JavaScript, TypeScript, HTML, CSS, Django, React Native, PostgreSQL, Postman, Docker

Memo Mobile Application Mini Project [\[LINK\]](#)

2023

(Group Project in Mobile Development Course)

- I divided the work among the people in the group and wrote the code for this app. An app for recording exam schedules, where you can add and subtract subjects to the exam schedule.
 - Use React-Native, JavaScript, and Android Studio.
-

EDUCATION

Bachelor of Science Program in Computer Science

Kasetsart University Kamphaeng Saen Campus

2021 - 2025

(GPAX 8 TERMS : 3.31)
